CAREER OBJECTIVE

Computer Science graduate candidate with hands-on experience in data engineering, analytics, and software development. Seeking a data-focused role where I can apply Python, SQL, and data technologies to build reliable solutions and support data-driven decision-making.

EDUCATION

Bachelor of Science in Computer Science

Sep 2026

Polytechnic University of the Philippines – Manila

- DOST Scholar; Cumulative GWA: **1.12** (1.00 = highest)
- Relevant Coursework: Database Management, Artificial Intelligence, Machine Learning, Software Engineering, Data Structures

EXPERIENCE

Data Engineer Intern

Jun 2026 – Aug 2026

Stratpoint Technologies

- Built end-to-end batch data pipelines across ecommerce and movie analytics projects, processing datasets ranging from **90K+** movie records to **1.55M** source rows using Python, PySpark, PostgreSQL, dbt, Airflow, and Docker.
- Designed dimensional data warehouses across staging, intermediate, and mart layers, with fact/dimension modeling and automated tests for grain, referential integrity, source preservation, and reconciliation.
- Translated business requirements into tested KPIs and decision-support dashboards, including a partner-screening solution that narrowed the candidate universe by **83.6%**.

Backend Developer Intern

Jan 2026 – Mar 2026

Department of Science and Technology – Science Education Institute (DOST-SEI)

- Developed RESTful backend APIs for a microservices platform using Node.js, TypeScript, and PostgreSQL, implementing business logic, database integrations, and service endpoints to support application features.
- Built and validated backend functionality through unit and integration testing with Jest and Postman, while collaborating in an Agile team to troubleshoot integration issues and deliver assigned features.

Software Engineer (Automation) Intern

Oct 2025 – Jan 2026

Edufied

- Optimized a Python/Playwright web-scraping pipeline backed by MongoDB, increasing job data extraction volume by **40%**.
- Built Python data-cleaning modules to filter non-target roles and improve the quality of lead data used for outreach campaigns.

Data Science Intern

Jul 2025 – Aug 2025

Lamina Studios, LLC

- Developed a Flask/MySQL analytics dashboard and REST APIs for driver performance, delivery activity, route times, support issues, and client-location trends, giving operations teams a consolidated view of delivery performance and service bottlenecks.
- Built interactive warehouse and fleet analytics using Python, Next.js, PostgreSQL, and Redis, integrating inventory, demand, RFID activity, and live GPS data to support near-real-time monitoring of stock levels, warehouse activity, and vehicle operations.

Data Science Intern

Nov 2023 – Mar 2024

NIDEC Control Techniques

- Developed a Python/Streamlit admin dashboard integrated with MySQL, enabling interactive management and validation of itinerary data for a prototype web application.
- Built Python-based data cleaning and validation workflows, reducing detected data errors by **25%** and improving the reliability of records used for dashboard and reporting features.

LEADERSHIP & VOLUNTEERING

Google Developer Student Clubs - PUP Main

Data Co-Lead

Sep 2023 – Jun 2024

Junior Data and AI Cadet

Oct 2022 – Aug 2023

- Co-led the organization's data track for 50+ members, designing member assessments and a structured learning roadmap covering core data engineering skills.
- Led the data engineering roadmap session during member onboarding and mentored members through hands-on data analysis and engineering activities and projects.

Junior Machine Learning Engineer

- Led the deployment workstream and contributed Python-based EDA for a Berlin waste-management ML project focused on waste composition, generation forecasting, and geospatial analysis to support recycling and resource-allocation decisions.
- Designed and developed a multi-page Streamlit analytics application integrating EDA, geospatial insights, and the project's waste-forecasting model, making predictions accessible by year, state, and waste type for planning use cases.

Facts on the Ground - Google Developer Student Clubs - PUP Main

Feb 2023 – Aug 2023

Lead Machine Learning Engineer

- Led a 7-member machine learning sub-team for an NLP news-analysis project using sentiment analysis, article classification, and summarization to help surface more concise and informative news content.
- Reduced irrelevant and low-quality data by **20.2%** through Python and pandas-based data validation and cleaning workflows.
- Coordinated text preprocessing using NLTK, including tokenization and normalization, preparing validated datasets for downstream NLP model development.

PROJECTS**Movie Analytics End-to-End Data Pipeline & Partner Screening Dashboard**

Aug 2026

- Built a multi-source movie data acquisition workflow, combining Kaggle datasets with TMDB API enrichment and reconciling source differences into an analytical scope of **90K+** movies, **44K+** companies, and **114K+** movie-company relationships.
- Engineered a PySpark/PostgreSQL/dbt transformation pipeline orchestrated through a 9-task Airflow workflow, producing a 22-model warehouse backed by 141 data tests covering grain, relationships, business rules, and reconciliation.
- Developed a Power BI decision-support dashboard that translated partner-screening rules into actionable KPIs, narrowing **44,940** companies by **83.6%** to **7,388** screening-eligible candidates for deeper investigation.

Olist Ecommerce End-to-End Data Pipeline & Regional Marketplace Analytics

Jul 2026

- Built and orchestrated a Python/PostgreSQL data pipeline processing **1.55M** source rows across 9 sources, using a 17-task Airflow DAG with 9 dynamically mapped loads, schema validation, transactional loading, audit logging, and rollback safeguards.
- Developed a **24-model dbt warehouse** with 5 dimensions and 3 fact tables, backed by **311 passing data tests** for grain, referential integrity, source preservation, and reconciliation.
- Built a Power BI decision-support dashboard to identify Brazilian states where customer demand outpaced local seller participation, supporting regional seller-recruitment investigation.

Cyclistic Bike-Share Analysis ([Github](#))

May 2026

- Cleaned and analyzed **5.44M** bike-share trips using Python and pandas, resolving invalid durations, missing values, station inconsistencies, and temporal data issues to create an analysis-ready dataset.
- Identified **337K+** commuter-like casual trips, representing **17.5%** of casual usage, and translated rider behavior patterns into a targeted membership-conversion opportunity through a Power BI dashboard.

SnakeSight — AI Image Classification Web App ([Github](#))

Mar 2025 – Mar 2026

Thesis: "AttenDenseNet: Integrating CBAM into DenseNet for Image Classification of Philippine Snake Species"

- Developed AttenDenseNet, a TensorFlow image-classification model integrating CBAM with DenseNet, trained on 1,400 labeled images across 14 Philippine snake species and achieving **89%** accuracy, 7 percentage points above the baseline model.
- Co-developed a full-stack Next.js/FastAPI AI application deployed on Microsoft Azure, delivering species predictions and confidence scores to support faster snake identification for medical professionals, toxicologists, and emergency responders.

SKILLS**Data Engineering & Analytics:** ETL/ELT, Data Pipelines, Data Integration, Data Warehousing, Relational Data Modeling, Dimensional Modeling, Data Cleaning & Validation, Data Quality, Exploratory Data Analysis (EDA), Web Scraping, Data Visualization**Languages & Data:** Python, SQL, PySpark, pandas, PostgreSQL, MySQL, MongoDB**Tools & Platforms:** dbt, Apache Airflow, Power BI, Docker, Supabase, Microsoft Azure, Git, GitHub, Microsoft Excel**Software Development:** TypeScript, Node.js, REST APIs, FastAPI, Flask, Next.js, Streamlit, Playwright, Postman**Machine Learning:** TensorFlow, Keras, scikit-learn, Image Classification, Model Training, Development & Evaluation**CERTIFICATIONS & CERTIFICATES**Microsoft Certified: Azure Fundamentals (**AZ-900**); Microsoft Certified: Azure AI Fundamentals (**AI-900**)

Google Career Certificates: Advanced Data Analytics; IT Automation with Python; Data Analytics Professional

DataCamp Certificates: Data Engineer Associate; Data Scientist Associate; Python Data Associate; Data Analyst Associate
